

Someone is expecting your check-in.

A field worker and their response team need a clear communications plan.

Keep going →

Sent. Received. Acknowledged?

Define what the worker and response team see at every message state.

Keep going →

Who takes the next step?

Set retry, alternate-path and human escalation rules for each event.

Lone-worker and safety-solution teams

Keep going →

And when no message gets through?

Make communication limits visible and define the worker's procedure for that state.

Keep going →

Build the whole safety plan.

Review the workflow with technical and safety owners; connectivity is not a safety guarantee.
